

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

- 5-5  
B.
1. (currently amended) A remote control device comprising:  
a receiver for wirelessly receiving a signal including content information ~~related to at least one television program;~~  
processing circuitry for processing the received signal to obtain the information; and  
a display for displaying the information, the device being configured to display a first content information comprising television program scheduling and a second content information comprising interactive data related to a scheduled program in the television program scheduling.
2. (original) The remote control device according to Claim 1, further comprising an input interface for interacting with the information displayed by the display.
3. (original) The remote control device according to Claim 2, wherein the input interface for interacting with the displayed information includes a directional cursor control mechanism  
having a device for controlling the position of a cursor on the display and a selection button for interacting with a portion of the displayed information corresponding to the position of the cursor.
4. (original) The remote control device according to Claim 2, wherein the display and input interface for interacting with the information displayed includes a touch screen that displays the information.

5. (original) The remote control device according to Claim 1, wherein the signal is received from one of a remote central station, an Internet connected host, and a set top box.
6. (original) The remote control device according to Claim 1, where the signal includes XML formatted data.
7. (currently amended) A system for displaying content information ~~related to at least one television program~~, said system comprising:
- an Internet connected host for transmitting a signal including the information related to the at least one television program; and
- a remote control device comprising a receiver for receiving the signal including the information related to the at least one television program, processing circuitry for processing the received signal to obtain the information, and a display for displaying the information, the device being configured to display a first content information comprising television program scheduling and a second content information comprising interactive data related to a scheduled program in the television program scheduling.
8. (original) The system according to Claim 7, further comprising an input interface for interacting with the displayed information.
9. (original) The system according to Claim 7, wherein the Internet connected host connects to a remote server via the Internet to receive the information related to the at least one television program.

10. (currently amended) A system for transmitting information related to at least one television program, said system comprising:

a remote central station for transmitting a signal including the information related to the at least one television program, wherein the signal is formatted to be received by a remote control device comprising a receiver for receiving the signal including the information related to the at least one television program, processing circuitry for processing the received signal to obtain the information related to the at least one television program, and a display for displaying the information, the device being configured to display a first content information comprising television program scheduling and a second content information comprising interactive data related to a scheduled program in the television program scheduling.

11. (original) The system according to Claim 10, wherein the remote central station includes Internet connection means for connecting to the Internet and transmitting the signal via the Internet.

12. (new) A remote control device comprising:  
a receiver for wirelessly receiving a signal including information related to at least one television program;

processing circuitry for processing the received signal to obtain the information;

a display for displaying the information; and

a memory unit wherein an algorithm may be stored and used to determine if the information to be displayed belongs in programmed categories.

13. (new) A remote control device for a television comprising:

a receiver for wirelessly receiving a signal including information related to at least one television program;  
processing circuitry for processing the received signal to obtain the information;  
a display for displaying the information;  
stored signal codes; and  
a manual select button for using the remote to switch between two or more televisions.

14. (new) A remote control device comprising:

a receiver for wirelessly receiving a signal including information related to at least one television program;  
processing circuitry for processing the received signal to obtain the information;  
a display for displaying the information; and  
an auto-zoom feature for zooming in and out the information.

15. (new) A remote control device comprising:

a receiver for wirelessly receiving a signal including information related to at least one television program;

processing circuitry for processing the received signal to obtain the information;

a display for displaying the information; and

an input device.

16. (new) The remote control device of Claim 15 wherein the input device comprises a roller ball.

- al  
concl*
17. (new) The remote control device of Claim 15 further comprising a transmitter for transmitting responses to a questionnaire or other information to a remote station.
